

# Author index

The author index gives places where an author is mentioned in the discursive text, but ignores the end bibliographies of individual chapters – unless the author was not specifically mentioned elsewhere in the text. Apart from names of authors, their places of work, and papers that have not been included in the present collection, the overviews of original conference papers in the Introduction to this book have not been indexed, since the final versions appear in this book. For publications by multiple authors, all author's names have been indexed, whenever possible.
